Cell killing induced by Bok can be suppressed by co-expression with selective anti-apoptotic Bcl-2 proteins. The Bok protein can be used to elucidate apoptosis mechanisms in reproductive and other tissues, and provide a means for manipulating apoptosis. The Bok protein and transgenic animal are also useful for identifying ligands or substrates. Modulation of the gene activity in vivo is useful for prophylaxis and therapy of, e.g. cancer and other proliferative disorders. Bok genes are also useful for identification of cell type based on expression. Identification of Bok as a new pro-apoptotic protein with wide tissue distribution and heterodimerisation properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence is a mammalian Bok (Bcl-2-related ovarian killer) protein, of the invention. Coding sequences for Bok or BH3 variants of pro-apoptotic Bok-related protein can be introduced into cell populations to upregulate expression of the proteins in order to induce apoptosis in the cell population. This is useful for treatment of diseases where there is hyperproliferation of reproductive tissue, e.g. uterine, testicular
                                                                                                                                                                                                         pro-apoptotic protein; apopto reproductive tissue; uterine

                                                                                                                                            protein can be used to elucidate apoptosis mechanisms in reproductive and other tissues, and provide a means for manipulating apoptosis. The Bok protein and transgenic animal are also useful for identifying ligands or substrates. Modulation of the gene activity in vivo is useful for prophylaxis and therapy of, e.g. cancer and other proliferative disorders. Bok genes are also useful for identification of cell type based on expression. Identification of Bok as a new pro-apoptotic protein with wide tissue distribution and heterodimerisation properties
                                                                                                                                                                                                                                                                                                         This sequence is a mammalian Bok (Bcl-2-related ovarian killer) protein, of the invention. Coding sequences for Bok or BH31 variants of pro-protein by the invention of the protein can be introduced into cell populations to upregulate expression of the proteins in order to induce apoptosis in the cell population. This is useful for treatment of diseases where there is hyperproliferation of reproductive tissue, e.g. uterine, testicular and ovarian carcinomas, endometriosis, squamous and glandular epithelial carcinomas of the cervix. Cell killing induced by Bok can be suppressed by co-expression with selective anti-apoptotic Bcl-2 proteins. The Bok
                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

                                                                                                                                                                                                                                                                                                                                                                   CC AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CS sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; CC antipsoriatic; antiporvisant; antiarthritic; immunosuppressant; CC immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; CC antidiabetic; hypotensive; dermatological; immunosuppressive; CC antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; CC antithyroid; and antianaemic. The sequences can be used for determining CC the presence of or predisposition to, or preventing or treating CC pathological conditions associated with an ORFX-associated disorder. The CC public acids can be used to express ORFX proteins in gene therapy CC vectors. The proteins and nucleic acids may be used to treat cancers, CC proliferative disorders, neurodegenerative disorders, osteoarthritis, CC proliferative disorders, neurodegenerative disorders, osteoarthritis, CC graft vs host disease, cardiovascular disease, diabetes mellitus, CC proliferation, hypothyroidism, cholesterol ester storage, systemic lupus CC erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, CC proliferation, palastic anaemia, burns, wounds, bone and cartilage damage, CC cagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                CC protein and transgenic animal are apoptotic Bc1-2 protein and transgenic animal are also useful for identifying ligands or compression of the protein for manipulations that can be introduced into cell populations. This is useful for treatment of diseases where there can be protein and carcinomas, endometriosis, squamous and glandular epithelial carcinomas of the cervix. Cell killing induced by Bok can be suppressed by co-expression with selective anti-apoptotic Bc1-2 proteins. The Bok context issues, and provide a means for manipulating apoptosis. The Bok context issues, and provide a means for manipulating apoptosis. The Bok context issues, and provide a means for manipulating apoptosis. The Bok context issues, and transgenic animal are also useful for identifying ligands or consustrates. Modulation of the gene activity in vivo is useful for consustrates. Modulation of the gene activity in vivo is useful for based on expression. Identification of Bok as a new pro-apoptotic protein with wide tissue distribution and heterodimerisation properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В

                                                                                                       protein can be used to elucidate apoptosis mechanisms in reproductive and other tissues, and provide a means for manipulating apoptosis. The Bok protein and transgenic animal are also useful for identifying ligands or substrates. Modulation of the gene activity in vivo is useful for prophylaxis and therapy of, e.g. cancer and other proliferative disorders. Bok genes are also useful for identification of cell type based on expression. Identification of Bok as a new pro-apoptotic protein with wide tissue distribution and heterodimerisation properties
                                                                                                                                                                                                                                       protein, of the invention. Coding sequences for Bok or BH31 variants of pro-apoptotic Bok-related protein can be introduced into cell populations to upregulate expression of the proteins in order to induce apoptosis in the cell population. This is useful for treatment of diseases where there is hyperproliferation of reproductive tissue, e.g. uterine, testicular and ovarian carcinomas, endometriosis, squamous and glandular epithelial carcinomas of the cervix. Cell killing induced by Bok can be suppressed by co-expression with selective anti-apoptotic Bok can be suppressed by co-expression with selective anti-apoptotic Bok can be suppressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bok protein; Bcl-2-related ovarian killer; BH31 variant; endometriosis; pro-apoptotic protein; apoptosis inducer; hyperproliferation disease; reproductive tissue; uterine carcinoma; testicular carcinoma; cervix; ovarian carcinoma; glandular epithelial carcinoma; cancer; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiucer; vulnerary; anticonvulsant; antibacterial; antiinflammatory; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antinilammatory; antiulcer; vulnerary; anticonvulsant antibacterial; antifungal; antiparasitic; cardiant; immune disorder; Addison's disease; allergy; autoimmune haemolytic anaemia;

The invention provides nucleic acid molecules (NAMI) encoding 4 human Bcl-2-like polypeptides (PEPI). The NAMI and PEPI may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate Bcl-2-like polypeptides expression. The NAMI may be used to produce the soluble Bcl-2-like polypeptides by standard recombinant methodolgy. The polypeptides may also be used as antigens in the production of antibodies against Bcl-2 and in assays to identify modulators of Bcl-2 expression and activity. The anti-Bcl-2 antibodies and antagonists may be used to down regulate expression and activity.
                                                                                                                                                                                                                                                                                  Claim 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bcl-2-like polypeptide; autoimmune disorder; allergy; immunomodulatory;

capable of detecting 1000 or more genes from Drosophila. The inventuation of the control of the capable of detecting 1000 or more genes from Drosophila. The inventuation is development of cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention relates

ç

an isolated nucleic

acid detection

reagent e invention

The apoptosis inhibitor or the apoptosis promoter can be used as a drug and a diagnostic agent for various diseases caused by apoptosis inhibition or apoptosis promotion. The present sequence represents the human Bcl-2 protein, which is an apoptosis inhibitor used, in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Screening of an apoptosis inhibitor or promoter which can be used drug and a diagnostic agent for various diseases caused by apoptos {\bf r}

This and other Bcl-2 mutants (see also AAW01019-21) were used in a two hybrid assay to examine the interactions between Bcl-2 and novel apoptosis-regulating proteins Nipl, Nip2 and Nip3 (AAW00997-99), 2 Motifs (AAW01003-04) on Bcl-2 were identified that are essential for interaction with the Nip proteins. These motifs show homology to motifs (AAW01005-06) identified on the adenovirus E1B 19K
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Apoptosis-regulating protein; Bcl-2; oncogene; adenovirus E1B 19K protein; cell death; cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            interaction with the Nip proteins. These motifs show to motifs (AAW01005-06) identified on the adenovirus apoptosis-blocking protein (AAW01010).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding apoptosis regulating proteins - useful diagnosing and treating immune disorders, malignancies, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chinnadurai G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EP733706-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                    The present invention describes: (1) a method for regulating cell death, C comprising exposing an isolated cell to a polypeptide selected from Nipl, Nip3, Bip1A, Bip5 and Bip13; (2) a method for neutralising the activity of the adenovirus E1B 19 kD protein, the Bcl-2 protein or the BHR-1 protein, comprising exposing an isolated cell to a polypeptide as in (1); and (3) a method for detecting molecules that bind to at least one polypeptide as in (1), comprising lysing cells, caposing the lysate to the polypeptide and detecting my molecule-polypeptide aggregates. The methods are useful for providing proteins able to bind to other proteins known to regulate cell survival e.g. it is known that E1B 19K protein provides a survival function similar to the cellular proteoncogene bcl-2 gene product which is able to block apoptosis in haematopoietic B and T cells. The present sequence represents a human Bcl-2 mutant protein from the present invention.
                                                                                                                                                Query Match

                                                                                                                                                                designated Bax. The Bax protein is used in a composition which comprises a bcl-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The specification also describes a composition comprising a hybrid protein comprising an activator domain of a transcriptional activator protein and a bcl-2 family member having a BHI domain and a BH2 domain another hybrid protein comprising a DNA-binding domain of the transcriptional activator protein and a second bcl-2 family member having a BHI domain and a BH2 domain; and a reporter gene linked to a transcriptional regulatory element whose transcriptional activity is dependent in the processor as the second of the transcriptional activity is
                                             of the two bcl-2 family members. The compositions are used to identify modulators of bcl-2-related function, e.g. substances that inhibit binding of Bax to bcl-2, which would be potentially useful as drugs
                                                                                                dependent on the presence or absence of a dimer of the two hybrid proteins. The bcl-2 family members are selected from naturally occurring Bcl-2, Bcl-xL, Bax, Mcl-1, Al, fragments thereof, and mutants having a mutation in the BHI and/or BH2 domain that alters intermolecular binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                               The present invention relates to a method of modulating apoptosis of a cell. The method comprises administrating to the cell an agent, comprising a BH1 domain or BH2 domain, capable of modulating formation of at least one complex selected from bcl-2:bcl-2 complexes, bcl-XL:bcl-XL complexes, bcl-2 associated X protein (Bax):Bax complexes, bcl-2:Bax complexes or bcl-XL:Bax complexes. Modulating apoptosis is sepecially useful in cancer therapy, and treating autoimmunity, immunodeficiency diseases (e.g. AIDS), reperfusion injury, myocardial infarction, stroke, traumatic brain injury, neurodegenerative diseases, aging, ischaemia, toxemia, infection, hepatitis, transplant rejection, and lymphoproliferative diseases. The present sequence is murine Bcl-2, which was used in a sequence alignment in the present interpretation, with murine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-NOV-1994;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bcl2 anti-apoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-apoptosis activity and occurs during the G2/M phase of the cell cycle. In the absence of growth factors, Bcl2 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bcl2 anti-apoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-apoptosis activity and occurs during the G2/M phase of the cell cycle. In the absence of growth factors, Bcl2 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases. Dephosphorylated by protein phosphatase 2A (PP2A) (By similarity). PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic activity, causes the release of cytochrome c into the cytosol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                including factor-dependent lymphohematopoietic and neural cells. Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding the apoptosis-activating factor (APAF-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             promoting further caspase activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                are produced by alternative splicing. TISSUE SPECIFICITY: Expressed in a va DOMAIN: The BH4 domain is required for the specific of the specifi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD, BAK and Bcl-x(L). Heterodimerization with BAX requires intact BH1 and BH2 domains, and is necessary for anti-apoptotic activity (BY similarity). Also interacts with APAF-1 and RAF-1. SUBCELLULAR LOCATION: Outer mitochondrial membrane, intracellular membrane of the nuclear envelope and the endoplasmic reticulum. ALTERNATIVE PRODUCTS: 2 isoforms; alpha (shown here) and beta;
